

DecodeLabs — Project 1: Data Quality Report

Dataset: E-Commerce Order Records

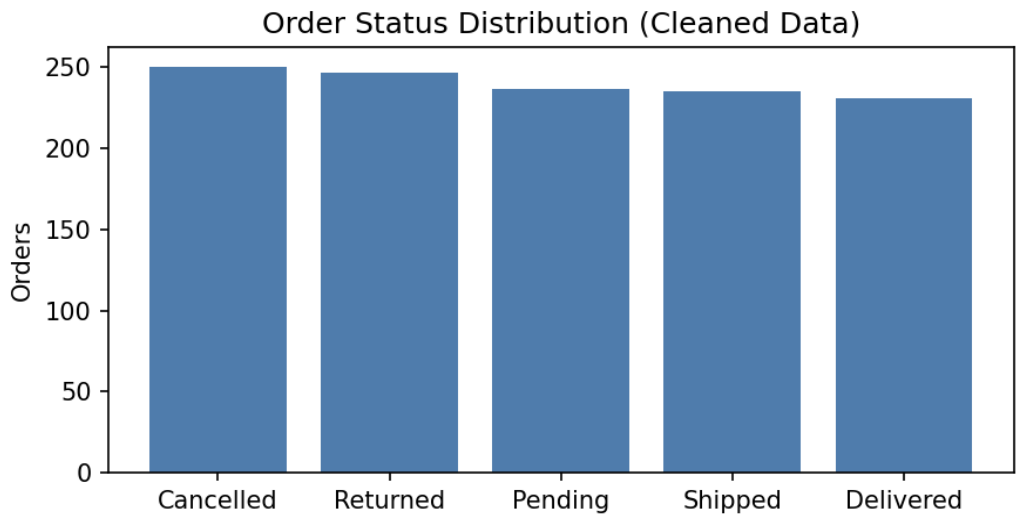

Metric	Raw	Cleaned
Rows	1200	1200
Columns	14	14
Missing values	309	0
Duplicate OrderIDs	0	0
Fully duplicated rows	0	0

Summary: the raw dataset arrived largely well-structured (no duplicate OrderIDs, no malformed dates, no formula errors in TotalPrice). The one substantive gap was 309 missing CouponCode values, which were imputed with an explicit 'NoCoupon' category rather than deleted, preserving 100% of order records and avoiding the statistical-power loss that comes from listwise deletion. All text and identifier fields were also normalized for consistent casing and whitespace to guarantee 'one truth, one record.'

Missing Values Identified (Raw Data)

Order Status Distribution (Post-Cleaning)

Verification Gate Result

Verification Gate	Result
Duplicate OrderIDs	0 (0% error rate)
Invalid / malformed dates	0 (0% error rate)
Missing values remaining	0
Rows in / rows out	1200 / 1200 (no data loss)
